PROFESSIONAL EXPERIENCE

Nxtgen AI Pvt Ltd. · AI Engineer — Inference Systems & Data Pipelines

Dec 2025 – April 2026

- Benchmarked 18 model/hardware configurations (NVIDIA H100, L40S, Intel Xeon) using a repeatable evaluation framework, adopted as the team standard for pre-deployment infrastructure validation.
- Queried and validated model configuration and benchmark data in PostgreSQL to support testing and QA of production inference pipelines.
- Modeled 5+ production load scenarios with Little's Law queueing theory to forecast concurrency and bottlenecks before deployment, reducing post-launch performance issues.
- Reduced VRAM footprint 4× via FP6/Q6/Q4 quantization across 6 open-source models without throughput degradation; built 2 reusable inference templates adopted team-wide to improve process repeatability.
- Identified and prototyped LLM-based tooling opportunities (automated flagging, query assistance) within inference workflows to accelerate internal analytics processes.

Aurus Alpha Ventures LLP · Derivatives Researcher Intern

May 2025 – Nov 2025

- Validated 8+ derivatives strategies against real transaction costs (STT, GST, slippage) using t-tests, regime-split analysis, and bootstrap resampling on 2 years of NSE F&O data — filtering out 100% of sub-threshold signals before they reached the trading desk.
- Authored 8+ internal research notes translating statistical findings on volatility dynamics and market microstructure into clear, decision-ready summaries for the desk.
- Tested 4 research hypotheses (vol surface, Greeks risk, microstructure, backtesting) using a reproducible Python framework (pandas, scipy, statsmodels), with methodology documented for repeatability.

Ikiquant Technologies Pvt Ltd. · Quantitative Analyst Intern

Apr 2024 – Dec 2024

- Investigated and resolved recurring timestamp mismatches in minute-level NSE derivatives data through manual root-cause analysis; built an automated correction script to eliminate the recurring break going forward, improving downstream data reliability without ongoing manual intervention.
- Validated 8+ backtested options strategies (Sharpe 1.8, 60% hit ratio) on multi-year NSE derivatives data through rigorous statistical testing before reporting results.
- Designed 10+ systematic technical indicators within a structured signal-evaluation framework, improving signal accuracy by +15%.
- Built 5+ real-time data pipelines ingesting live tick data, applying consistency checks to flag ingestion anomalies.

EDUCATION & CERTIFICATIONS

HSNC University, Mumbai · B.Sc. Data Science & Business Analytics · GPA 9.45/10 · 2022–2025

Certification: NISM-Series-VIII Equity Derivatives (May 2024) — exchange-traded derivatives regulation, contract specifications, and risk frameworks.

SKILLS

Data & Analytics: SQL (PostgreSQL) · Python (pandas, numpy, scipy, statsmodels) · Data validation & quality checks · Root-cause investigation · Anomaly/exception identification · Statistical hypothesis testing (t-tests, bootstrap, regime analysis)

Tools & Systems: Tableau · Streamlit · Git · TensorRT-LLM · LangChain (multi-agent orchestration, tool calling) · WebSocket · FastAPI

Domain: NSE F&O derivatives · Greeks & volatility surface analysis · Backtesting · Quant research methodology

KEY PROJECTS

- Black-Scholes Pricing Engine: real-time Greeks (Δ Γ V Θ) across 5+ configurable strategy payoffs with live interactive payoff diagrams and input validation.
- VRP & Day-Night Asymmetry Research Framework: 4-stage statistical validation pipeline (t-stat · Sharpe · drawdown gates) with state-persisted risk gate and automated fail-fast cost filter — built for repeatability and auditability of research outputs.
